

**ABSTRACT**

A container for storing and dispensing plastic bags and process for manufacturing the  
5 same. The container includes a front panel extending from the top of the container to the bottom  
of the container and having a substantially smooth surface with no sharp bends. The container  
includes a funnel-shaped aperture for facilitating insertion of the plastic bags into the container in  
a compact and collapsed form. The container has a flat profile that allows the container to be  
mounted to a vertical surface in a space-saving manner and that helps minimize entanglement as  
10 more bags are inserted into the container. The container also includes an access opening for  
dispensing the plastic bags.
